ABSTRACT

Many Non-government organizations are working in the country. A non-governmental organization is an organization with no self-profit, group based on the citizen that functions independently of government. NGO activities include, but are not limited to, environmental, social, advocacy, and human rights work. They can work to promote social or political change on a broad scale or very locally. NGOs play a critical part in developing society, improving communities, and promoting citizen participation. This WEB application connects people to various NGOs based on their needs. The application connects people directly to the relevant NGO. The information about various NGOs is given based on their field of operation. If an individual requires the services of or wants to volunteer can directly communicate with NGOs. NGOs can communicate at various levels through this application. If a person or a group wants to be a volunteer in any such NGO, it can do so by registering through this app. And if a person has a query so they can communicate with the help of a chatbot.

Keywords : -NGO, WEB APPLICATION, REGISTER, VOLUNTEER, CHATBOT

I. INTRODUCTION

A Non-profit organization is the one that operates independently without involving any government employee or government support, with a purpose to light up a social or political issue. Most of the NGOs have a lot of donation but they lack in having a project to use their funding. So, looking into problem our Web Application helps the user to connect with the nearest working NGOs. This Web application connects people to various NGOs based on their needs Our Web Application has a detailed information education, animal, child, environmental. You can sponsor a child's education by donating Rs 800 or more monthly. If an individual requires the services of or wants to volunteer can directly communicate with NGOs. Our Web application helps people connect NGOs volunteer's registration. It helps to register free volunteer service. This project involves the development of a Web Application

which provides a platform for users to connect with different NGOs that shows the information that includes real-time events, NGOs information, etc. The ultimate goal of this project is to make a dynamic website that would display the contents specified by the user which would help the user to get updated with the event and to work efficiently. Non-government organizations are non-profit organizations many of them work privately not for the government. Most of the NGO work in human welfare but NGO work is not only limited to human issues it also includes other issues. Some NGO also works for the environmental issue and social issues.

Taken from Paper of Vaccaro A and Madsen the Defination of Ngo is cited as A non-governmental organization (NGO) is a group that Functions independently without the help of the government without thinking about their profit. Some NGOs work for social activities which, then organized on

national levels as well as in a small society level to contribute towards political as well as social purpose, and are collaborative, rather than profit-based in nature. A non-government organization is usually created by a person or a group of the person working in order to bring change in society where NGOs are sponsored partly by the government but NGOs keep their non-government status by excluding members of the government.

II. RELATED WORKS

NGO sectors and their contributions to civil society and democracy yet, exploration of this complexity are often eschewed in favour of a normative approach in which the mutually enhancing relationship between NGOs, civil society and the state is underpinned by liberal democratic assumption rather than an engagement with wider debates about the politics of development. Many NGOs build their website which provides the user with contact information and Information about their NGO so whenever a needy person needs to have contact with NGOs so they can contact easily. But sometimes user comes in an issue when they want to connect with particular NGO (NGO work for human rights, NGO work for Animal Rights, NGO work towards Plant) or they want to get information about any event get carried out nearby. So, to solve all this issue we gone provide a single platform for the user. An individual who is actually in need can directly communicate with NGOs. NGOs can communicate at all levels. If a person is hesitating to meet NGOs directly, he/she can chat and discuss their problems in the chatbot. You can also apply to become a Volunteer. It helps to improve the standards of living.

III. SOFTWARE

BROWSER

A web browser is a software application for accessing the information on the World Wide Web. So, one needs to have a Browser enabled with Js, html5 to access a “SEELIFE” website.

OPERATING SYSTEM

- **Windows:** 8 or newer
- **MAC:** OS X v10.7 or higher
- **Linux:** Ubuntu

IV. HARDWARE

MEMORY

RAM is a computer part which temporarily carries software and files in current use so that currently running application can be easily run. To run the SEELIFE website one needs to have 1 to 1.5 GB RAM in laptop or PC so that website can be easily run at the user side.

PROCESSOR

The purpose of a computer processor is to do the actual computation done by the computer so to access the website one needs a computer at least 2 GHz minimum, multi-core processor

V. FLOW CHART

VI. CONCLUSION

SEELIFE website helps the user and NGO as:

- An individual who is willing to donate can directly communicate with NGOs.
- NGOs can add and view events added by them.
- One can apply to become a volunteer.
- The user can get real-time updates about Events of NGOs.
- The content can be viewed uniformly on any display device.
- Chatbot service is available to help the user.
- Users can easily view newly added events when they log in on the website.
